## TECHNICAL APPENDIX

This appendix provides technical details about the calculation of weights and variances for the E&T evaluation.

### SITE-LEVEL WEIGHTS

Local FSAs were selected based on probabilities proportional to the estimated size of their E&T caseloads. Site-level weights were calculated as the inverse of these selection probabilities.

### SAMPLING FRACTIONS

The overall sampling fraction for a given E&T model is:

$$f = (\text{Participant Sample Size})/(\text{Eligible Population Size}).$$

Unfortunately, the size of the eligible population was unknown and had to be estimated from data on the number that are eligible within each selected local FSA. Thus, the estimated overall sampling fraction is:

$$\begin{aligned} f &= (\text{Participant Sample Size})/\text{Estimated Eligible Population} \\ &= (\text{Participant Sample Size})/ \left( \sum_{i=1}^n N_i / \pi_i \right) \quad (1) \end{aligned}$$

where  $N_i$  is the number of expected eligible Food Stamp enrollees in a month and  $\pi_i$  is the selection probability for the  $i$ -th selected county. In order to achieve this overall sampling

fraction, the sampling fraction **within** each county,  $f_i$ , must satisfy:

$$f_i = \hat{f} \frac{N_i}{n_i \pi_i}$$

where  $N_i$  is the number eligible in a county and  $n_i$  is the number eligible in the selected offices, both on a monthly basis. Formula (2) was the starting point in determining the sampling fractions within selected counties. In those offices where the initial sample selections met the criterion that  $f_i \leq .40$ , formula (2) did indeed determine  $f_i$ . However, this criterion was not met in many cases and either  $f_i$  was artificially restricted to be .40, or the value used for  $\hat{f}$  was adjusted to ensure that the target sample size was met. It should be stressed that these were the initial target sampling fractions. During the recruitment of the study participants, these fractions were raised substantially in order to meet the required sample sizes.

#### **SITE-LEVEL NONRESPONSE ADJUSTMENTS**

At a late stage in the sample recruitment and training phase, a number of sites refused to participate. Furthermore, procedural problems in two sites resulted in these sites being dropped from the study as well. These modifications in the original sample design required adjustments in the sampling weights for the remaining sample units as follows:

$$\pi_i = \frac{n' - 1}{n'} \pi'_i$$

where  $n'$  refers to the number of units selected in the relevant model and  $\pi_i$  represents the original sampling probability.

## ADJUSTMENTS FOR UNEQUAL SAMPLING RATES

Because of lower-than-expected client flows, the sampling rates were adjusted at many sites during the course of the data collection. Several steps were necessary to adjust for this and for differences in the duration of the data collection periods.

Assume that the  $j$ -th local office within the  $i$ -th site has  $q$  distinct sampling rates,  $f_{ij1}, f_{ij2}, \dots, f_{ijq}$ , which have been applied for  $r_{ij1}, r_{ij2}, \dots, r_{ijq}$  workdays, respectively. Standardized sampling fractions,

$\bar{f}_{ijk}$ , were calculated as

$$\bar{f}_{ijk} = \frac{\sum_{a=1}^q r_{ija}}{q-1} f_{ijk}$$

and  $\bar{f}_{ijk}$  was assigned to all sampling units in local office  $j$  within site  $i$  while the sampling rate  $f_{ijk}$  was in effect. Coincidentally, this process standardizes the weights to refer to an 84 day period. This is consistent with the initial sampling plan of collecting data for three months (which would have approximately 84 working days).

## CONSTRUCTING THE BASIC SAMPLING WEIGHTS

Denote the site and local office selection probabilities as  $\pi_i$

and  $\pi_j^{(i)}$  respectively (thus,  $\pi_j^{(i)} = n_j/N_i$ ).

The basic sampling weights were then calculated as:

$$w = \text{Basic Sampling Weight} = (\pi_i \pi_j^{(i)} f_{ijk})^{-1}$$

### **EXCLUSIONS OF CERTAIN E&T ELIGIBLES**

In one State (consisting of five local FSAs), 18-25 year olds on GA were excluded from the study because of a State mandate that prevented the creation of a control group for these individuals. In one other site, all GA clients were excluded. To adjust for these exclusions the sampling weights for GA recipients in all other sites were increased proportionately to account for the missing eligibles.

### **FIRST WAVE WEIGHTING AND NONRESPONSE ADJUSTMENTS**

Adjustments for nonresponse to the First Wave followup survey were based on the following characteristics as determined from the BIF:

- o Age of participant (30 or younger, 31 or older)
- o Sex of participant
- o Size of participant's household (single person, other).

The basic steps in developing the nonresponse adjustments consisted of computing exploratory cross-tabulations on the BIF file to determine appropriate adjustment classes, estimating the nonresponse adjustment factors for each nonresponse cell, and then applying the nonresponse factors to the sampling weights. Before calculating the actual nonresponse adjustments, data were imputed for 114 cases that had missing data for one or more items (50 nonrespondents, 64 respondents; altogether about 1% of the file). For nonrespondents, values were assigned at random using the data in Table 1. In most cases, missing data for respondents was obtained from the survey data, but when it was not available, it was assigned using Table 2.

74-9

To use Tables 1 and 2, random numbers were generated between 0 and 1 and values assigned if the random number was smaller than the corresponding percentage shown in the table. For example, if a nonrespondent whose BIF indicates that the household consisted of a single person but had missing data for race, a random number  $u$  was generated and assigned the race value "white" if  $u \leq .34$  and the race value "other" if  $u > .34$ . When a BIF was missing more than one item, the hierarchy shown in Table 1 was followed, i.e., assigned race first, then sex and finally age, generating new random numbers at each step.

The final adjustments for the First Wave weights were made by calculating:

$$W_i^{(4)} = F_i W_i^{(3)}.$$

## SECOND WAVE WEIGHTING AND NONRESPONSE ADJUSTMENTS

All respondents to the First Wave **with** telephones and approximately half the First Wave respondents **without** telephones were eligible for the Second Wave survey. The former is referred to as the "telephone group" and the latter as the "non-telephone group." To select the non-telephone group, half of the sites were selected at random; all First Wave respondents in these sites (with or without telephones) were eligible for the Second Wave survey. These sites are referred to as the included sites, as opposed to the other sites where First Wave respondents without telephones were excluded from the Second Wave follow-up.

There are two other details which should be noted at this point. The first is that 89 sample units in the telephone group were apparently misplaced at the telephone center and were not contacted. This list of 89 Second Wave sample units follows no obvious pattern; for example, they are scattered (apparently at random) among the sites. Rather than nonrespondents, this group is referred to as potential respondents that were simply not contacted during the Second Wave. In any case, this group was eligible for the Third Wave follow-up.

The second point is that while all of the Second Wave sample units that were hard to reach (e.g., telephone had been disconnected) were "tracked," only those in the included sites were contacted for an in-person interview. Thus the hard-to-reach Second Wave sample units in the telephone group at the excluded sites will also be referred to as potential respondents, and this group was also eligible for the Third Wave follow-up.

As with the First Wave, the first step in Second Wave weighting consisted of determining appropriate nonresponse weighting classes. To do this, the following cross-tabulations were prepared:

- o NAGE\*SEX\*NNROST\*RACE2\*RESP
- o NAGE\*SEX\*NNROST\*RESP
- o (NAGE SEX NNROST RACE2)\*RESP

where NAGE, SEX, NNROST, RACE2, and RESP are categorical variables indicating, respectively 30 or younger vs. 31 or older, male vs. female, single vs. "other" household, white vs. other race, and respondent vs. nonrespondent. Based on a review of these cross-tabulations, the nonresponse adjustment classes,  $C_i$ , shown in Table 3 were defined.

The nonresponse adjustments force the weights to sum to the total of the weights of all eligible Second Wave sampling units, excluding the potential respondents in the telephone group and sample units without telephones at excluded sites. Once the classes  $C_i$  have been defined, calculating the adjustments is simply a matter of summing weights of respondents and nonrespondents over the classes.

The final First Wave weights are denoted as  $w_i^{(4)}$ . The calculation of the Second Wave nonresponse adjustment factor for

the  $i$ -th class,  $f_i^{(2)}$ , is:

$$f_i^{(2)} = \frac{\sum_{j \in C_i} w_j^{(4)} (1 - \gamma_j)}{\sum_{j \in C_i} w_j^{(4)} \delta_j}$$

where:

$w_j^{(4)}$  = the final First Wave sampling weight for the  $j$ -th record;

$\delta_j$  = 1 for respondents and 0 for nonrespondents;

$\gamma_j$  = 1 for (i) the non-telephone group at excluded sites and (ii) potential respondents in the telephone group; in cases other than (i) and (ii),  $\gamma_j = 0$ .

Now define

$$w_j^{(5)} = \delta_j f_i^{(2)} w_j^{(4)} + \gamma_j w_j^{(4)} \quad \text{for } j \in C_i$$

Notice that the weight  $w_j^{(5)}$  is (i) adjusted by  $f_i^{(2)}$  (for the appropriate nonresponse adjustment class) when the unit is a respondent, or (ii) defined as the final First Wave weight for "potential respondents," or (iii) set to 0 for valid nonrespondents. Also, notice that these weights sum to the same total as the final first stage weights, which is the same as the sum of the base weights on the BIF.

Three further adjustments must be made to the second stage weights. Let

$\gamma_{1j}$  - 1 for any of the 89 units that were eligible but not contacted, and 0 otherwise

$\gamma_{2j}$  - 1 for potential respondents in the telephone group at excluded sites, and 0 otherwise

$\gamma_{3j}$  - 1 for First-Wave respondents in the non-telephone group at excluded sites, and 0 otherwise.

Notice that  $\gamma_{1j} + \gamma_{2j} + \gamma_{3j} = \gamma_j$ .

The following notations are used:

T = sample units in the telephone group;

H = sample units in the "hard-to-reach" telephone group;

E = sample units the non-telephone group at excluded sites.

Now calculate:

$$f_1^* = \frac{\sum_{j \in T} w_j^{(5)}}{\sum_{j \in T} w_j^{(5)} (1 - \gamma_{1j})}$$

$$f_2^* = \frac{\sum_{j \in H} w_j^{(5)}}{\sum_{j \in H} (w_j^{(5)} (1 - \gamma_{2j}))}$$

$$f_3^* = \frac{\sum_{j \in E} w_j^{(5)}}{\sum_{j \in E} w_j^{(5)} (1 - \gamma_{2j})}$$

The final Second Wave weights are now given by:

$$w_j^{(6)} = (1 - \gamma_{1j}) f_1^* w_j^{(5)} \quad \text{for } j \in T-H$$

$$= (1 - \gamma_{2j}) f_1^* f_2^* w_j^{(5)} \quad \text{for } j \in H$$

$$= (1 - \gamma_{3j}) f_3^* w_j^{(5)} \quad \text{for } j \in E.$$

Thus the final weights are adjusted by  $f_1^*$  for all respondents in the telephone group, by  $f_1^*$  and  $f_2^*$  for respondents in the telephone group that were hard to reach, and by  $f_3^*$  for respondents in the non-telephone group at included sites (Table 4 provides the Second Wave adjustment classes, as before.)

### THIRD WAVE WEIGHTING

Final weights were constructed for each month in which data were collected. Thus there are between 1 and 12 weights for each record.

For each month of data collection -- that is, first month after random assignment, second month after random assignment, etc. -- the wave for which that data were collected. Thus, for example, participant records could resemble the following:

Record	Wave of Enumeration											
	1	2	3	4	5	6	7	8	9	10	11	12
1	1	1	1	1	1	2	2	2	3	3	3	3
2	1	1	1	1	2	2	2	3	3	3	3	3
3	1	1	1	1	1	1	2	2	2	2	2	2
4	1	1	1	-	-	-	-	-	-	-	-	-
5	-	-	-	-	-	-	-	-	-	-	-	-

Notice that participant 4 was a nonrespondent after the First Wave, while participant 5 was nonrespondent to the First Wave. The main point here was to determine which month the data ends for each respondent.

As for previous waves, nonresponse weighting classes were defined specifically for the Third Wave. These are shown in Table 5. In making the nonresponse adjustments, the First Wave nonresponse classes were used for months 1-4, the Second Wave classes for months 5-8, and the Third Wave classes for months 9-12.

The nonresponse adjustments force the weights for each month to sum to the total of the First Wave weights. The computational process is the same for each month. Consider making the

nonresponse adjustments for month k. For the j-th record, define

$\delta_{jk} = 1$  if data is present for month k  
for participant j

0 otherwise.

As noted above, there are three possible sets of nonresponse adjustment classes, but there is only one associated with the k-th month. Thus, for the k-th nonresponse class the adjustment factor,

$f_{ki}$ , was calculated as

$$f_{ki} = \frac{\sum_{j \in C_{ki}} w_{jk}^{(3)}}{\sum_{j \in C_{ki}} w_{jk}^{(3)} \delta_{jk}}$$

where the  $w_{jk}^{(3)}$  are previously defined. Define

$$w_{jk}^* = \delta_{jk} f_{ki} w_{jk}^{(3)} \quad \text{for } j \in C_{ki}.$$

This was repeated for  $k = 1, 2, \dots, 12$ . The weights  $w_{jk}^*$  are the final weights.

## VARIANCE CALCULATIONS

The variance estimation formulas for cluster sampling are very complex. The formulas provided here therefore only approximations which take into account the multiple stages of selections; after some consideration, it was decided not to account for the finite population corrections, which are relatively small in any case. Linearized approximations are used for the variances of

ratios and differences between ratios. Other methods of variance estimation include balanced repeated replications (BRR) and the jackknife.

### VARIANCES FOR TOTALS AND AVERAGES

It is assumed that totals and averages of a characteristic  $y$  are being estimated and that this characteristic has the value  $y_{ij}$  for the  $j$ -th participant in the  $i$ -th site. First, suppose that an estimate is desired for the variance of an estimated total for  $y$ :

$$(1) \quad \hat{Y} = \sum_{ij} y_{ij} w_{ij}.$$

(The weight shown here,  $w_{ij}$ , may be for the First, Second or Third wave.) The first step is to aggregate totals to the site level:

$$(2) \quad T_i = \sum_j y_{ij} w_{ij},$$

Notice that this sum extends over all participants in the  $i$ -th local office, regardless of household. Next, the within-stratum variances must be calculated. There are 11 strata, of which the first three are in Model 1, the next three in Model 2, and so forth. Within the  $h$ -th stratum, find the variance of the estimated total for  $y$ :

$$(3) \quad \hat{V}_h(y) = \left( \sum_{i \in h} T_i^2 - \frac{1}{n_h} \left( \sum_{i \in h} T_i \right)^2 \right),$$

where  $n_h$  is the sample size for stratum  $h$ , and where the notation  $i \in h$  indicates that the sums are over the sites in stratum  $h$ . Finally,

calculate

$$\hat{V}(y) = \sum_h \hat{V}_h(y) .$$

This sum might extend over particular models or over all models, depending on the needs of the analyst.

To find the estimate of an average, several additional calculations are necessary. First the number of participants  $\hat{N}$ , the variance of  $\hat{N}$  and then the covariance between the  $\hat{N}$  and  $\hat{Y}$  must be estimated. To obtain  $\hat{N}$ , calculate

$$(4) \quad \hat{N} = \sum_{ij} w_{ij} .$$

The average value of the characteristic  $y$  is estimated by

$$(5) \quad \hat{Y} = \frac{\hat{Y}}{\hat{N}}$$

To find the variance of  $\hat{N}$ , first set

$$(6) \quad U_i = \sum_j w_{ij} ,$$

then calculate

$$(7) \quad \hat{V}_h(w) = \left( \sum_{i \in h} U_i^2 - \frac{1}{n_h} \left( \sum_{i \in h} U_i \right)^2 \right)$$

and, finally,

$$(8) \quad \hat{V}(w) = \sum_h \hat{V}_h(w).$$

To find the covariance, use the formulas

$$(9) \quad \hat{C}_h(w, y) = \left( \sum_{i \in h} T_i U_i - \frac{1}{n_h} \left( \sum_{i \in h} T_i \right) \left( \sum_{i \in h} U_i \right) \right)$$

and

$$(10) \quad \hat{C}(w, y) = \sum_h \hat{C}_h(w, y).$$

Finally, the variance of an average is estimated by

$$(11) \quad \hat{V}(\bar{Y}) = \left( \frac{1}{N} \right)^2 \left( \hat{V}(y) + \left( \frac{\bar{Y}}{N} \right)^2 \hat{V}(w) - 2 \left( \frac{\bar{Y}}{N} \right) \hat{C}(w, y) \right).$$

## VARIANCES OF TREATMENT EFFECTS

Most analyses will consist of comparing means of various quantities between the treatment and control groups by calculating

$$d = \hat{Y}_1 - \hat{Y}_2$$

where  $\hat{Y}_1$  and  $\hat{Y}_2$  are the estimated means for the characteristic  $y$  within the treatment and control groups, computed as in formula (5). To estimate  $V(d)$  requires computing several additional covariance terms. First compute the following:

$$(12) \quad \hat{C}_h(y_1, y_2) = \left( \sum_{i \in h} T_{1i} T_{2i} - \frac{1}{n_h} \left( \sum_{i \in h} T_{1i} \right) \left( \sum_{i \in h} T_{2i} \right) \right)$$

$$(13) \quad \hat{C}_h(w_1, w_2) = \left( \sum_{i \in H} U_{1i} U_{2i} - \frac{1}{n_h} \left( \sum_{i \in h} U_{1i} \right) \left( \sum_{i \in h} U_{2i} \right) \right)$$

$$(14) \quad \hat{C}_h(y_1, w_2) = \left( \sum_{i \in h} T_{1i} U_{2i} - \frac{1}{n_h} \left( \sum_{i \in h} T_{1i} \right) \left( \sum_{i \in h} U_{2i} \right) \right)$$

$$(15) \quad \hat{C}_h(w_1, y_2) = \left( \sum_{i \in h} U_{1i} T_{2i} - \frac{1}{n_h} \left( \sum_{i \in h} U_{1i} \right) \left( \sum_{i \in h} T_{2i} \right) \right)$$

Now compute:

$$(16) \quad \hat{C}(y_1, y_2) = \sum_h \hat{C}_h(y_1, y_2)$$

$$(17) \quad \hat{C}(w_1, w_2) = \sum_h \hat{C}_h(w_1, w_2)$$

$$(18) \quad \hat{C}(y_1, w_2) = \sum_h \hat{C}_h(y_1, w_2)$$

$$(19) \quad \hat{C}(w_1, y_2) = \frac{\sum_h}{\hat{C}_h} (w_1, y_2)$$

Using these calculations, the variance of the difference between treatment and control means is given by the formula:

$$\begin{aligned} \hat{V}(d) &= \hat{V}(\hat{Y}_1) + \hat{V}(\hat{Y}_2) \\ &- \frac{2}{\hat{N}_1 \hat{N}_2} (\hat{C}(y_1, y_2) + \hat{Y}_1 \hat{Y}_2 \hat{C}(w_1, w_2) - \hat{Y}_2 \hat{C}(y_1, w_2) - \hat{Y}_1 \hat{C}(w_1, y_2)) \end{aligned}$$

where the  $\hat{V}(\hat{Y}_i)$  are the estimated variances for the treatment means (computed using formula (11)), and where the  $\hat{N}_i$  are the

summed weights for the treatment and control groups (computed from formula (4)).

Explanation of Participation:

EVALUATION OF THE FOOD STAMP  
EMPLOYMENT AND TRAINING PROGRAM

I understand that (Name of local food stamp site) is participating in an important research Study that will help to determine how effective the new Food Stamp Employment and Training Program is in providing employment assistance to Food Stamp recipients. This Study is authorized by Congress and is sponsored by the Food and Nutrition Service of the U.S. Department of Agriculture. I voluntarily agree to participate in this Study and have had the following things explained to me:

1. If I am determined to be eligible for Food Stamp benefits I will not be receiving Food Stamp Employment and Training Program services for the next 12 months. This is because as part of the Study, I have been assigned to be in what is known as a control group.

2. My participation in this Study will not affect my eligibility for Food Stamp benefits.

Certification/Recertification Information

- Where are FS clients, Public Assistance clients/General Assistance clients certified and recertified (i.e., Public Assistance unit, Non-Public Assistance unit, intake unit, on-going unit, etc.)?
- Number of FS clients in each unit.
- Number of caseworkers in each unit that process FS clients.
- What is the physical/administrative organization of units (i.e., are units in separate buildings, spread across multiple floors, etc.)?
- What is the denial rate of FS applications?

Identification of work registrants for the FSETP

- Who identifies work registrants?
- At what point in the certification/recertification process?
- Are any forms completed for work registrants in the certification/recertification unit? (Obtain a copy of any form which is used.)
- Is work registrant information maintained in an automated information system?

Volunteer participation

- Are volunteers allowed to participate in FSETP?
- How are volunteers referred to FSETP?

Communications between certification/recertification unit and the Employment and Training/FSETP unit.

- How are mandatory participants and volunteers identified by the E & T/FSETP unit?

Organization structure of the FSETP

- Is the E & T unit organized exclusively for FSETP participants or is it part of a comprehensive employment unit?
- How are FSETP clients distinguished from other employment and training program participants?
- How many E & T staff persons work with FSETP clients?

Notification of FSETP requirements

- How are mandatory FSETP participants informed of their FSETP requirement?
- Who initiates contact with participants?
- By what means (mail, phone call) is this contact made?
- What is the time period between FS certification/recertification and contact by the E & T unit notifying FSETP participants of their work and training obligations?

- Nonresponse to initial FSETP contact
  - What is the rate of nonresponse/"no-show" to initial contact?
  - What are the follow-up procedures for this initial nonresponse?
  
- Initial contact with mandatory FSETP participants
  - What occurs?
  - In group setting or individual contact?
  - Are clients assessed/reassessed to determine if they are "temporarily excused" or job ready?
  - Does initial contact determine component assignment?
  
- Participant movement through FSETP
  - What components are offered?
  - How is component assignment determined (i.e., based on individual characteristics)?
  - Do all participants move through components in the same sequence?
  - What is the time period for participation in each service component of the FSETP?
  - What is the maximum duration of FSETP participation?
  - Is participation between components staggered?
  
- Monitoring of FSETP participants
  - Who monitors participant's progress in the FSETP?
  - Do participants visit/call-in the E & T office at regular intervals?
  - Are individual E & T case files maintained?
  - Are monitoring records maintained? (Obtain copy of monitoring form used.)

Noncompliance with FSETP regulations

- When is a FSETP participant sanctioned for noncompliance?
- Who begins the sanctioning process?
- Do the E & T workers and EWs communicate regarding the sanctioning process?
- Are E & T workers informed of the outcome of the sanctioning process?
- Who is primarily responsible for sanctioning clients?

FSETP data

- Date the FSETP program began.
- Number of participants for (the most recent month available).
- Number of FSETP volunteers for (the most recent month available).
- Does this data represent a typical month?

Implementing the Evaluation

- Random assignment - who will be the local coordinator?
- Will the local coordinator be accessible to all caseworkers?
- Who will serve as a back-up to the local coordinator?
- How will CPHF be transferred to the FSETP unit?
- How long should CPHF remain in the case folder?

Second site visit contact

- Who will serve as contact at the local agency for the second site visit?

**Program Operations Inventory**

9. INTEGRATION/COORDINATION

Is the E and T Program integrated and/or coordinated with other programs?

integrated = The local Food Stamp site operates the Food Stamp E and T Program jointly with, contracts with, or pays another agency to provide services for E and T Program participants.

coordinated = The Food Stamp E and T Program is a separate and distinct program but has sought to enlist the cooperation of other programs through informal or formal cooperative agreements.

## SECTION B – LABOR FORCE ACTIVITIES

Hello, I'm (YOUR NAME) of Westat, a private research company. (IF PARTICIPANT ASKS ABOUT STUDY, READ EXPLANATION ON COVER PAGE OF MAIN QUESTIONNAIRE). Your part of the interview will only take a few minutes. My first questions are about your work experiences since (BASELINE DATE). In answering the questions, please include any full or part-time jobs which have lasted one week or more, including any self-employed jobs. Also include any work in a family business or farm whether paid or unpaid. Don't include any workfare or work experience jobs you may have been assigned to in order to keep receiving food stamps.

- **FOLD OUT EMPLOYMENT CHART. BEFORE CONTINUING, WRITE IN NAMES OF MONTHS STARTING WITH BASELINE MONTH AND ENDING WITH MONTH OF INTERVIEW. WRITE IN BASELINE DATE AND INTERVIEW DATE. DRAW HORIZONTAL ARROW ON EMPLOYMENT CHART TO BASELINE DATE AND TO INTERVIEW DATE.**

**U.S. Department of Agriculture  
Food and Nutrition Service**

**EVALUATION OF FOOD STAMP EMPLOYMENT AND TRAINING PROGRAM**

**THIRD FOLLOWUP INTERVIEW**

**INTRODUCTION:**

Hello, I'm (YOUR NAME) of Westat, a private research company. May I speak to (PARTICIPANT NAME) please? We interviewed you last (1ST/2ND FOLLOWUP DATE) for a survey we're doing for the U.S. Department of Agriculture and we'd like to talk with you again.

This survey is being conducted to obtain information about people's experiences with the services provided by the Food Stamp Program. It is also concerned with people's work-related experiences and their efforts to find work.

While your participation in this study is voluntary, your help and cooperation will enable the Department of Agriculture to improve programs which assist people who receive food stamps.

Before we begin, I want to assure you that your answers and all information that would permit identification of you and your family will be kept confidential in accordance with the Privacy Act of 1974. Any government benefits you may receive will not be affected in any way by your

## SECTION B – LABOR FORCE ACTIVITIES

The next questions are about your work experiences since (1ST FOLLOWUP/2ND FOLLOWUP DATE). In answering the questions, please include any full or part-time jobs which have lasted one week or more, including any self-employed jobs. Also include any work in a family business or farm whether paid or unpaid.

- CHECK ASSIGNMENT FOLDER TO SEE IF RESPONDENT WAS GIVEN 2ND FOLLOWUP INTERVIEW.
- FOLD OUT EMPLOYMENT CHART. BEFORE CONTINUING, WRITE IN NAMES OF MONTHS STARTING WITH MONTH OF PREVIOUS FOLLOWUP AND ENDING WITH MONTH OF THIRD FOLLOWUP INTERVIEW. WRITE IN PREVIOUS FOLLOWUP DATE AND INTERVIEW DATE. DRAW HORIZONTAL ARROW ON EMPLOYMENT CHART TO 1ST FOLLOWUP/2ND FOLLOWUP DATE AND TO INTERVIEW DATE.
