Description Notes

VA Meeting / Tuesday 3 Feb 81.

- Analytical studies that support the MD AND Risk assessment
- Environmental data as it impacts exposure Risk
- Animal data as a model
- The human concerns

Assessment of Signs/symptoms

Episode Evaluation

VIETNAM

Sweden

Seveso

Finland

Coalition

(Industrial)

Methodologies

Studies in Progress

List of Speakers/Chairman

Advisory / Editorial Board

Kearney was wrong again - It was not
MOMA but cacodylic acid. He was the one who
said n-butyl esters of D & T have
never been used in USA.

Evaluation of the Human Health Effects

Respect to:

Conclusions from Eghin Studies

- Rapid degradation of 24-D & 24,5-T
- 9

Persistence associated with high density materials (Herbicide) not Draining

> 700 greater than ^{Application} ~~Effect~~ _{Pass}

Now than NO Application

Impacts approx 2,000 times greater than would have expected in biological RUN Application

Purple US Orange - Dioxin level 20 X in purple than Orange (water 45 ppm)

~~Not~~ ^{PCDD} 470,000 X greater than ~~level~~ ^{at site} _{run} = RUN

1900 X greater than Commercial use

single sign of toxicity

At 240 grams compared to 3000 grams at Eghin

Applied not in the course of Testing spray equipment 1962 - 1970

Body Burden 1971

27
1962
1809

187,000

27
1960
165/acre
