DEAN OF FACULTY

UNITED STATES AIR FORCE ACADEMY, COLORADO

Annual Research Progress Report No. 13

October 1978

COVERING PERIOD

1 July 1977 - 30 September 1978

Annual Research Progress Report No. 13

Covering Period

1 July 1977 - 30 September 1978

This document has been approved for public release and sale;
its distribution is unlimited

This is the sixth published Annual Research Progress Report; the editions previous to 1972 were published as Semi-Annual Progress Reports. Further information desired on any project may be obtained by writing to the department listed for the principal investigator, USAF Academy, Colorado 80840.

TABLE OF CONTENTS

Page

I. SCIENTIFIC AND ENGINEERING INVESTIGATIONS

A. Department of Aeronautics

1. Flow Field Disturbance Created by Porous Spoilers	1
2. The Flow Dynamics of Unsteady Separating Regions	1
3. Improved Airplane Maneuvering Performance	2
4. Productive Applications of Dynamic Aeroelasticity	2
5. Estimation of Instantaneous Distortion for the YF-12C Inlet	3
6. Plume Effects on Missile Aerodynamics	3
7. Laser Doppler Velocimeter Development for USAFA Wind Tunnels	4
8. Academy Turbine Engine Test Facility	4
9. Aircraft Protuberance Drag	4
10. Pitot Static Systems	5

B. Department of Astronautics and Computer Science

1. Defining the Computer Science Curriculum	5
2. Academic Test Generation System	5
3. Special Education Data Base Management System	6
4. System Enhancements to Provide Visual Demonstration of Algol Programs	6
5. Data Base Development for Statistical Research	6
6. USAF Academy Computer Graphics System Design	7

7.	Survey of Software Engineering Factors	7
8.	Burroughs TD820/HP7210A Interface	8
9.	USAF Academy Computer Graphics System Development	8
10.	GPSS Compiler Enhancements	8
C. Department of Chemistry and Biological Sciences		
1.	Pattern Analysis and Correlation of Weather and Air Pollution Data in the Pikes Peak Region	9
2.	Photochemical Energy Storage	9
3.	Ultrastructural Analysis of Mammalian Tissues Exposed to Depleted Uranium	10
4.	Reaction of Mesylate Esters with Energetic Alcohols	10
5.	A Spectroscopic Investigation of the Selenium Halides	11
6.	Determination of the Effects of Wastewater Reuse	11
7.	An Evaluation of Worldwide Endeavors in Genetic Engineering . . .	13
8.	Fate of Herbicide Orange in Soils	13
9.	Analysis of TCDD in Biological Samples	13
10.	Chemical and Microbiological Monitoring of Sites Previously Used for Storage of Military Herbicides	14
11.	The Effect of Hyperbaric Oxygen on Mycotic Disease Agents . . .	15
12.	Chemical Structure/Bonding Decomposition Relationships	15
13.	Citizen's Workshop Program on Energy and the Environment . . .	16
14.	Comparison of Stress Responses in Male and Female Cadets at the USAF Academy	17
15.	Physical and Electrochemical Measurements	18
16.	Chemiluminescent Gas Phase Reactions	19

D. Department of Civil Engineering, Engineering Mechanics and Materials

1. Bio-Engineering	19
2. Certification of Side Facing Troop Seats for the UV-18 Aircraft	20
3. Development of General Second Order Component Mode Synthesis With Application to Rotor Bearing Systems	20
4. Dynamics of Aircraft-Runway Interaction	20
5. Elastic Waves in Layered Media	21
6. Finite Element Cable Studies	21
7. Fracture Mechanics	22
8. High Speed Ground Transportation	22
9. Hot Corrosion	23
10. Load Deformation Relationship for Split-Ring Timber Connectors.	23
11. Metal Joining Techniques	23
12. Solar Energy	24
13. Tension-Torsion Interaction Strength of Laminated Wood Bolts .	25
14. T-38 Structural Integrity	25
15. Turbine Engine Metal Matrix Composite Blade Analysis	25
16. Wind Energy Conversion System (WECS)	26

E. Department of Electrical Engineering

1. Space Test Program Experiment Prioritization	26
2. Microprocessor System Development for Aircraft Simulation Visual System Control	26
3. Portable, Self-Contained, Educational Microprocessor System Development	27

4.	Microprocessor Instrumentation of the F-15 APG-63 Radar	27
5.	Data Acquisition System Development	28
6.	Bulk Properties of Annealed High Resistivity Gallium Arsenide	28
7.	6502 Microprocessor Emulator System	28
8.	Space Experiment Integration	29
9.	Educomm - An Analog Communications Trainer	29
10.	Microcomputer Controlled Event/Alarm Scanner	29
11.	Measurement of Surface Change and Currents Utilizing Infrared Technology	30

F. Department of Mathematical Sciences

1.	Transshipment/Allocation Algorithm for Cadet Summer Transportation Requirements	31
2.	Safe Escape	31
3.	Digital Signal Sorting	32
4.	Development of a Fix Computation Algorithm for Use in High-Frequency Direction-Finding Systems	32
5.	Mathematical Modeling and Identification	33
6.	Network Evaluation Through Simulation	33
7.	USAFA/DMA R&D Program	33
8.	Shock Waves in Explosives	34
9.	An Encke Method in Poincare'-Similar Elements	34

G. Department of Physics

1.	A Study of Proton Range "Straggling" Due to Initial Beam Energy Distribution	35
----	--	----

2.	Determination of 14 MeV Neutron Fluences Using Copper Activation Foils and Gamma Coincidence Counting	35
3.	Soft X-Ray Emission from Coronal Loops	36
4.	Chemical Structure/Bonding Decomposition Relationships and Chemiluminescent Gas Phase Relationships	36
5.	Laser Isotope Separation - Economics and Applications	37
6.	Aircraft Engine Oil Analysis by Neutron Activation Techniques.	38
7.	Diurnal Variation of Total Electron Content of the Ionosphere.	38
8.	Optical Detection of Damage in Solids	38
9.	Analysis of Photometric Data on the Massive Eclipsing Binary Star V382 Cygni	39
10.	Design and Fabrication of a Current-Technology Flywheel-Electric Vehicle	40
11.	A Physics Model of a Runner for Possible Use in Athlete Training and Education at the United States Air Force Academy.	40

II. GENERAL RESEARCH IN THE HUMANITIES AND SOCIAL SCIENCES

A. Department of Behavioral Sciences and Leadership

1.	Pilot Performance with Peripheral Vision	41
2.	The Effects of Job Enrichment and Goal Setting on Job Satisfaction and Organizational Effectiveness	41
3.	Stress Management Research	42
4.	Male and Female Anxiety During Survival, Evasion, Resistance and Escape (SERE) Training	42
5.	Reacquisition and Maintenance of Flying Skills	43
6.	Personal and Environmental Factors Contributing to BCT and Fourth Class Year Attrition	43
7.	Similarities of Men and Women in Perceptions of Their Work and Their Affective Responses: An Empirical Test	44

8.	Analysis of Soviet Behavioral Sciences	44
9.	Analysis of Information Sources Within the Air Force	44
B.	Department of Economics, Geography and Management	
1.	Preferential Tariff Reductions: The Philippine Response, 1900-1940	46
2.	The Rent-Buy Decision for Military Families	46
3.	The Utilization of Side-Looking Airborne Radar (SLAR) in the Analysis of Karst Topography	47
4.	Change After an Earthquake Disaster in Western Anatolia	47
5.	Analysis of Crime in Manitou Springs, Colorado (1976- June 1977)	48
6.	Energy Atlas of Montana	48
7.	Energy Atlas of Utah	49
8.	Energy Atlas of Wyoming	49
9.	Energy Atlas of Colorado	49

7. An Evaluation of Worldwide Endeavors in Genetic Engineering

Principal Investigator: Captain Robert H. Zellers, Department of Chemistry and Biological Sciences

Associate Investigators: Captain Martin D. Zahn and Captain Robert A. Peterson, Department of Chemistry and Biological Sciences

Sponsored by the Defense Intelligence Agency

This is an on-going evaluation that was begun in FY76. Current research in genetic engineering is being monitored through literature reviews, personal interviews, and attendance at appropriate symposia. Collection of information results in an analysis of trends and progress in genetic engineering efforts with emphasis on potential applications. A final report will be submitted in October 1978.

8. Fate of Herbicide Orange in Soils

Principal Investigators: Major William J. Cairney, Department of Chemistry and Biological Sciences; Captain Alvin L. Young, Occupational and Environmental Health Laboratory, Brooks AFB, TX; Dr. H. H. Cheng, and Mr. Joseph T. Majka, Department of Agronomy and Soils, Washington State University

Sponsored by Air Force Logistics Command

This cooperative field study is being conducted jointly by the Department of Chemistry and Biological Sciences, USAF Academy, and the Department of Agronomy and Soils, Washington State University. The study is attempting to assess breakdown products of both high and low concentrations of 2,4-D and 2,4,5-T n-butyl esters applied at rates comparable to spills in former AFLC Herbicide Storage Sites. A combination of ring and side chain labeled ^{14}C -2,4-D or ^{14}C -2,4,5-T n-butyl esters is being used in experiments which will provide data on probable degradation pathways, identification of metabolites, and rates of degradation. Field minilysimeters have been installed at the Washington State University Department of Agronomy and Soils Experiment Station. Corresponding microbial analysis is being conducted at the USAF Academy which will correlate levels of herbicide and herbicide metabolites with microorganism populations and diversity.

9. Analysis of TCDD in Biological Samples

Principal Investigators: Major William J. Cairney, Department of Chemistry and Biological Sciences; Captain Alvin L. Young, Occupational and Environmental Health Laboratory, Brooks AFB, TX; Dr. Michael Gross, Department of Chemistry, University of Nebraska

Sponsored by Air Force Logistics Command

In support of the Air Force Logistics Command project on Disposition of Herbicide Orange, the Department of Chemistry and Biological Sciences has been conducting extensive research on the fate of TCDD (2,3,7,8-tetrachlorodibenzo-p-dioxin, a contaminant of Herbicide Orange) in the environment. Since 1975, personnel of this department have been collecting soil and biological samples from areas exposed to Herbicide Orange and TCDD. One hundred samples have been collected, placed separately in glass jars and maintained in a freezer pending analysis of TCDD at parts per trillion level (ppt). The analysis of TCDD in biological systems requires a complex extraction and cleanup system in addition to highly sophisticated instrumentation. No Air Force laboratory currently has this capability. Two universities currently do have, but only one (The University of Nebraska) is available. The University of Nebraska is currently under contract to the Department of Chemistry and Biological Sciences, USAF Academy, to analyze these biologicals. A technical report is forthcoming which will summarize all of our past data on the fate of TCDD in biological systems and incorporate the results from the University of Nebraska analyses.

10. Chemical and Microbiological Monitoring of Sites Previously Used for Storage of Military Herbicides

Principal Investigators: Major William J. Cairney, Department of Chemistry and Biological Sciences; Captain Alvin L. Young, Occupational and Environmental Health Laboratory, Brooks AFB, TX; Dr. B. Mason Hughes, Flammability Research Center, University of Utah

Sponsored by Air Force Logistics Command

This study is part of an overall effort by Air Force Logistics Command to reclaim, decontaminate, and restore areas formerly used for the storage of Military Herbicides. The two former storage areas are respectively located at the Naval Construction Battalion Center, Gulfport, Mississippi, and on Johnston Atoll in the Pacific Ocean. The initial phase of decontamination is chemical and microbiological site monitoring. Forty-three sites have been selected at each location for analysis. Test sites were selected on the basis of heavy herbicide spill and heavy herbicide odor (designated H/H), light herbicide spill and odor (designated L/L) and no detectable spill or odor (designated O/O). In addition controls were selected from locations adjacent to former storage areas which had never received any herbicide. Testing of these sites for 2,4-D, 2,4,5-T, and associated dioxins is in progress and will continue over a two year (or more) period. Levels and diversity of soil microflora are currently being determined and will be correlated with levels of herbicide to assess the possible effects of herbicide on microflora and possibly provide data on the role of microorganisms in herbicide biodegradation. The Flammability

Research Center at the University of Utah is uniquely suited to provide Mass Spectrometric chemical analytical support. Dr. Mason Hughes has personally developed all of the protocol being used and is able to analyze for 2,4-D, 2,4,5-T and breakdown products at a resolution unattainable anywhere else in the world. In addition, he has assembled an automated, computer-linked system which provides rapid results. Present experimental results indicate that high levels of herbicide and dioxin are present in storage site spills. Microbial studies have shown that application of 2,4-D and 2,4,5-T at massive rates (5000-40,000 ppm) not only did not sterilize the soil, but actually stimulated the growth of some soil microorganisms. This next set of samples (programmed for October-November 1978) will begin to yield data on breakdown rates in the two storage sites.

11. The Effect of Hyperbaric Oxygen on Mycotic Disease Agents

Principal Investigator: Major William J. Cairney, Department of Chemistry and Biological Sciences

This research is presently unsponsored. The project attempts to determine oxygen toxicity limits for selected mycotic disease agents in an effort to find expanded application for the USAF Compression Chamber Treatment Facilities (i.e., Hyperbaric Chambers). Students in English 330 and Bio Sci 499 are programmed to do literature review and experimental studies on the project. Preliminary results indicate that a number of mycotic disease agents have oxygen toxicity limits within levels readily tolerated by susceptible humans and animals.

Publication

Cairney, W. J. 1978. Effect of hyperbaric oxygen on certain growth features of *Candida albicans*. *Aviat. Space Environ. Med.* 49(8):956-958.

12. Chemical Structure/Bonding Decomposition Relationships

Principal Investigator: Major Joel W. Beckmann, Department of Chemistry and Biological Sciences

Associate Investigators: Captain R. Martin Guidry, Captain Larry P. Davis, Lt John S. Wilkes, Frank J. Seiler Research Laboratory; CIC Robert Wheelock, CIC Craig Gilbert, Department of Chemistry and Biological Sciences

Sponsored by the Frank J. Seiler Research Laboratory, Air Force Systems Command (AFSC)

Two areas of study were conducted as Chemistry 499 projects under the supervision of Major Beckmann.

a. The objectives of CIC Gilbert's project were the isolation and identification of the catalytic precursor to the thermal decomposition of Trinitrotoluene (TNT). This project resulted in identification of the catalytic precursor as 4,6-dinitroanthranil. Also, the formation of 4,6-dinitroanthranil fits nicely into a mechanism for TNT thermal decomposition proposed by Capt Shackelford.

b. The objective of CIC Wheelock's project was to investigate the decomposition mechanism of hexanitrostilbene (HNS) via the kinetic isotope effect expected from the replacement of the allytic protons with deuteriums. This effect is used to help determine whether the C-H/C-D bond breakage in HNS and similar compounds such as TNT is rate determining. The kinetic results obtained were inconclusive; however, they provided two major improvements in the current experimental procedure; computer data acquisition and a variation in the synthetic technique for deuterated HNS.

13. Citizen's Workshop Program on Energy and the Environment

Principal Investigator: Captain Ronald E. Channell, Department of Chemistry and Biological Sciences

Associate Investigators: Lt Colonel Hugh T. Bainter, Major John H. Birkner, Major James R. Wright, Captain Elroy A. Flom, Captain John A. Klube, Captain James T. Norelius, Captain Donald A. Potter, Captain Ronald E. Watras, Department of Chemistry and Biological Sciences; Dr. Phil Kearney, Colorado State University, Fort Collins, CO; Dr. Mike Lowenstein, Navarro College, Corsicana, TX; Mr. Roger Howard, West Junior High School, Grand Junction, CO

Sponsored by the Department of Energy through Interagency Agreement

Citizen's Workshops are educational programs that give citizens an opportunity to learn more about energy and environmental needs and problems. Participants get a chance to try their hand at solving some of the energy-environment problems facing the nation today by using an Energy-Environment Simulator.

The Energy-Environment Simulator is a specially designed analog computer that simulates real-world conditions. Energy resources, energy demands, and environmental effects are programmed into the electronic device. As the clock speeds time by at the rate of a century a minute, participants must make decisions about the allocation of energy resources. They do this by operating controls on remote panels in response to the changing situation.
